DOSER GROUPS

1 GENERAL

The installation, operating and maintenance instructions in this manual conform to the EU Directive 2006/42/EC on machinery. The Operating and Service Manual is an integral part of operating the unit. Store it for subsequent use.

This manual is copyright protected. Copying or distributing the document or parts of it with IT or data transfer equipment or to networks without Oy SKF AB Muurame's express permission is prohibited.

Oy SKF Ab Muurame reserves the right to make changes to the content and technical specifications in this manual.

2 MAINTENANCE

If you have any technical questions, please do not hesitate to contact us:

Oy SKF Ab

P.O. Box 80, FI-40951 Muurame, FINLAND

Tel. +358 (0) 207 400 800

www.skf.com

3 SKF SAFETY INSTRUCTIONS

This operating and service manual contains basic information which must be observed when installing, operating and maintaining the unit. It is necessary for the installer and operator to read these instructions before installation and commissioning. Ensure that these instructions are always accessible to operating personnel.

In addition to these general safety instructions, the special safety instructions provided in other sections of this document must be followed.

Safety signs

Symbol	Meaning
	General risk of injury and damage
	Voltage
	Hot surface
	Risk of slipping

Warnings and their meanings

WARNING	Meaning
DANGER!	Indicates risk of injury to people
WARNING!	Indicates danger to buildings, machines or environment
NOTE!	Indicates additional information

3.1 Safety instructions for the operator

Electricity-related risks must be prevented by following the current electrical safety regulations.

3.2 Safety instructions for maintenance, inspection and installation

The operator must ensure that all maintenance, inspection and installation work is carried out by authorized and qualified specialists. This operating and service manual must be available to these staff members.

DANGER! Electrical connections must only be made by qualified electricians. Operating voltage must be shut off before touching any parts with power supply. Operating voltage must be shut off before opening any parts of the unit.

DANGER! Ensure that power to the unit is switched off during maintenance. Smoking and producing open flames and sparks while working on or in the vicinity of hydraulic systems is forbidden.

DANGER! Ensure that the unit is not pressurized during maintenance.

WARNING! Oils and water-polluting fluids must not be allowed to enter the soil, water courses or sewer systems. Ensure that oils are disposed of safely and without harming the environment. The relevant regulations in the country must be observed with regard to water pollution and oil disposal.

3.3 Warranty and liability

Oy SKF Ab Muurame will not assume any liability, nor will the warranty provided for the product cover any loss in the following cases:

- The unit has not been used for its intended purpose.
- The unit has not been appropriately installed, de-commissioned or operated.
- The unit has been operated using impure lubricants or materials that have not been approved.
- The unit has been maintained or repaired incorrectly.
- Parts other than Oy SKF Ab's original spare parts have been used in the unit.
- The unit has been altered in ways that Oy SKF AB Muurame has not approved.
- Instructions for transportation and storage have not been followed.

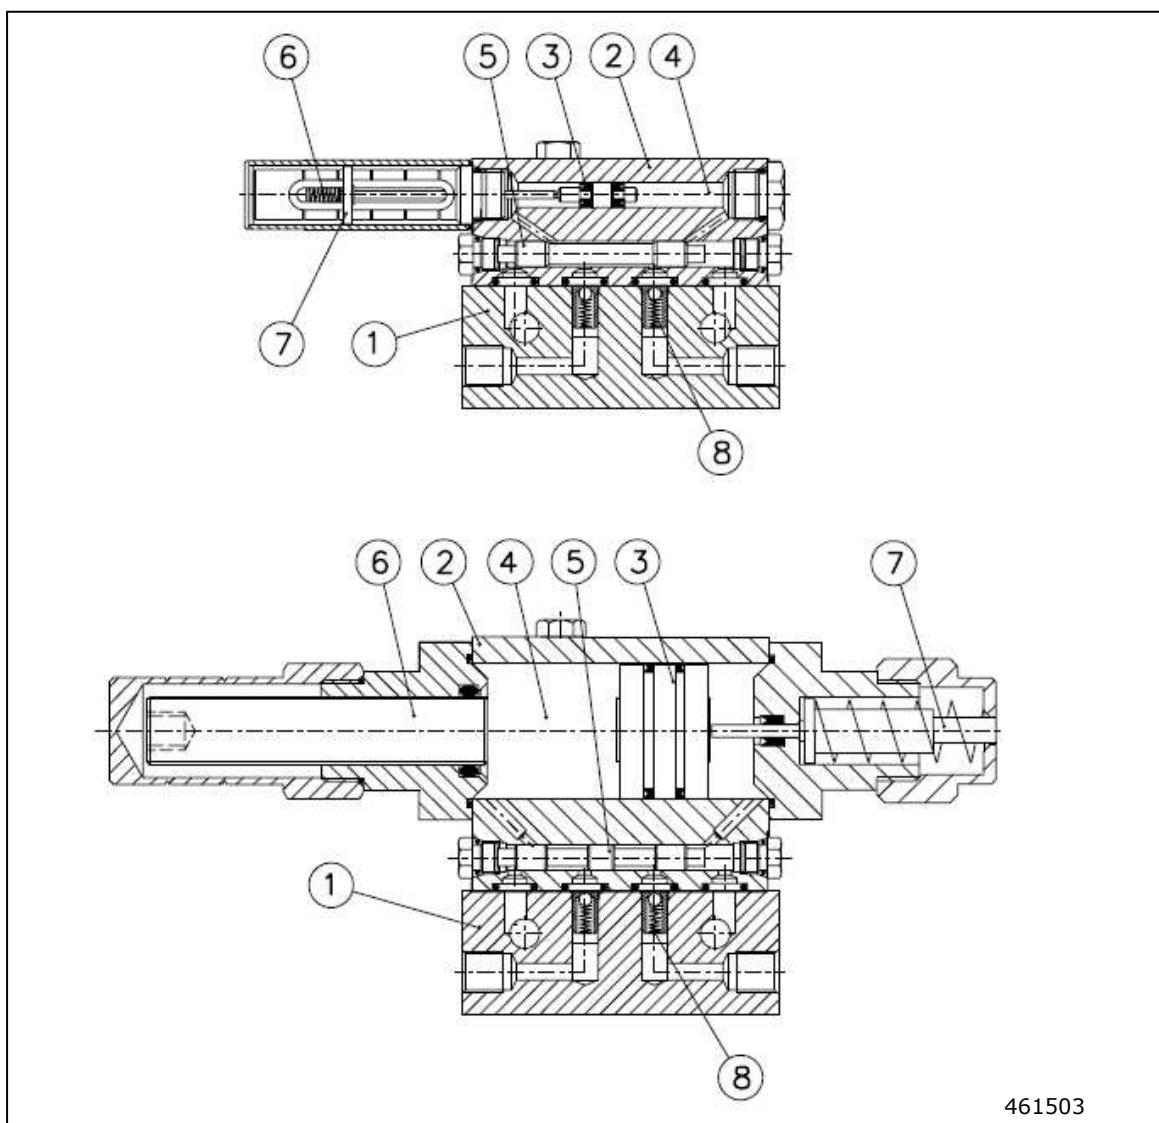

4 GENERAL DESCRIPTION

A doser group consist of a base plate (pos. 1) and one or more dosers attached to it (pos. 2). The base plate divides the lubricant to the dosers, which feed the preset amount of lubricant to the lubrication points.

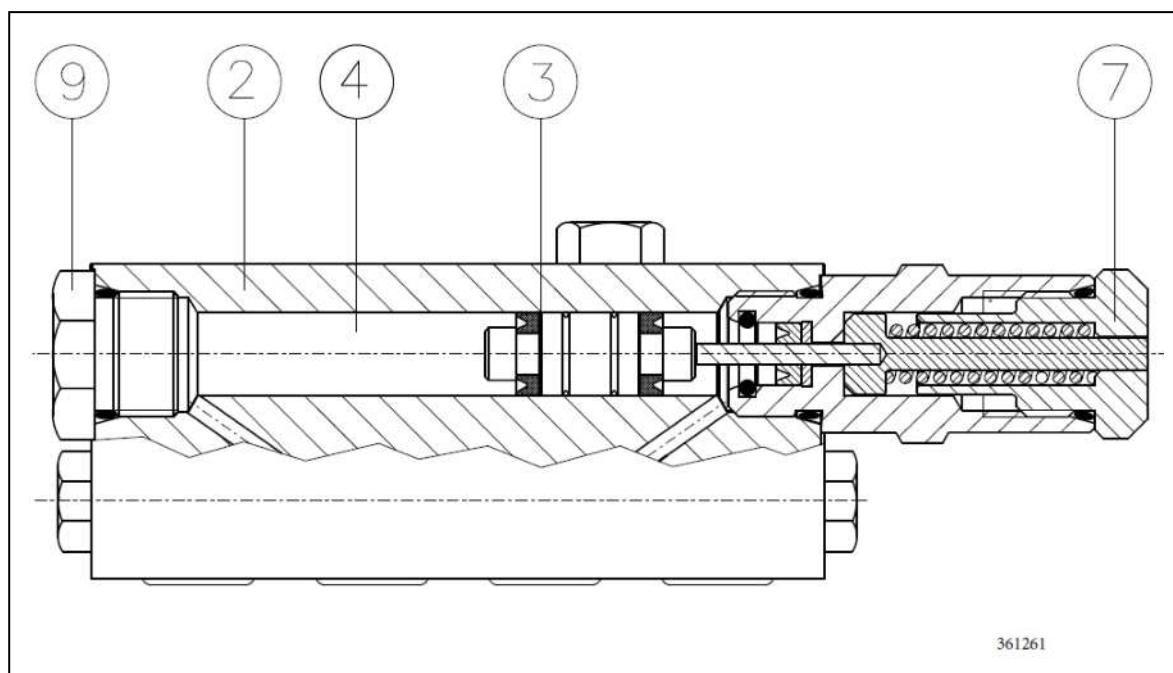

5 DESIGN, SG DOSERS

The main components of the doser are the body (2), double-seal piston (3), pilot valve (5), adjustment screw (6) and indicator (7). Piston movement is controlled with the adjustment screw, and the indicator indicates doser adjustment and functioning.

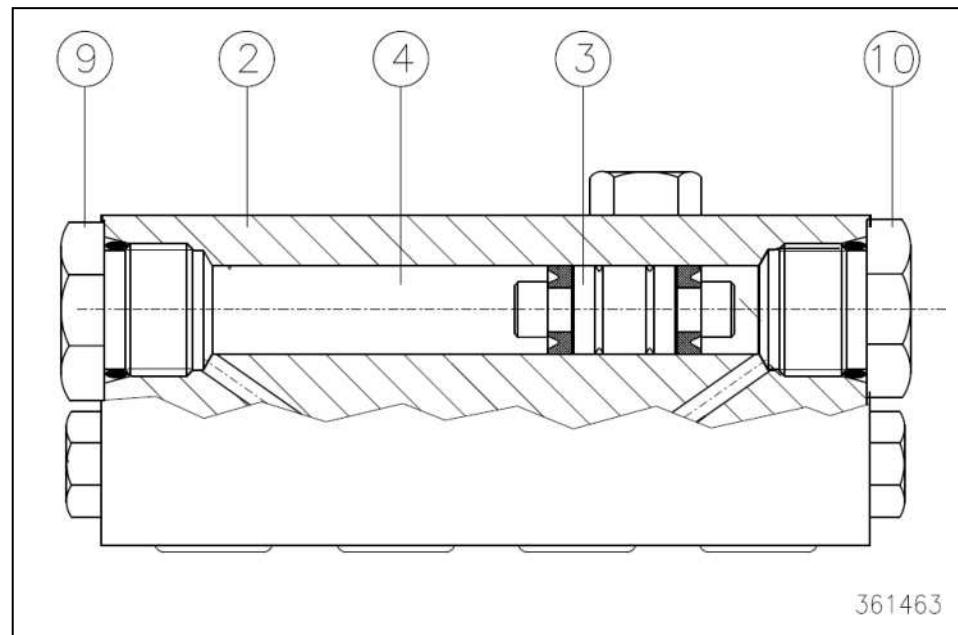

The lubrication outlet connections of the base plate are equipped with check valves (pos. 8). The design allows dosing of small lubricant volumes from the doser because backflow is prevented.

The indicator and adjustments in an SGA-xxx-WI -type doser are different from standard SG2 -type doser. The indicator has no plastic cover and adjustments are made with adjusting plugs of varying sizes (pos. 9).

The indicator and adjustments in an SGA-xxx-NI -type doser are different from standard SG2 -type doser. The indicator is replaced with a plug (pos. 10) and adjustments are made with adjusting plugs of varying sizes (pos. 9).

6 OPERATION

6.1 Dosers with two outlets

Dosers with two outlets alternate dosing between opposite outlet connections between lubrication cycles.

The pressure in the line increases during pressurization and the doser pilot valve moves to its extreme position, whereupon the lubricant moves the dosing piston. When the dosing piston moves, it pushes the lubricant through the base plate check valve to the lubrication pipe or lubrication hose and further to the lubrication point.

When the pumping starts again, the directional valve directs the lubricant to another main line whereupon the doser pilot valve directs the lubricant to the opposite side of the dosing piston. When the dosing piston moves, it pushes the lubricant through the base plate check valve and further to the lubrication point.

6.2 Dosers with one outlet

During normal sequential operation, dosers with one outlet always feed lubricant to the same outlet connection.

The design of the doser with one outlet is different from the doser with two outlets only by the design of the pilot valve, which makes it possible to choose the outlet connection from the base plate. The opposite outlet on the base plate must be plugged. The operation of the doser with one outlet is similar to the operation of doser with two outlets.

6.3 Unfastening and fastening dosers

The dosers are removed from the base plate by loosening the two M6 hex head screws on top of the doser.

WARNING! When replacing dosers, make sure that there is no pressure in the system.

The dosers are fixed to the base plate with the M6 hex head screws delivered with the doser. Make sure that the O rings between the doser and the base plate are in place before fixing the dosers.

WARNING! If the doser fastening screws are tightened too much, the operation of the doser might be prevented. The maximum tightening torque is 8 Nm.

WARNING! When changing the doser, make sure that the type marking on the doser and the number of outlets are identical. The last number on the doser type marking shows the number of outlets.

7 ADJUSTMENTS

7.1 General

Lubricant dosage is adjusted by changing the piston's range of movement from the adjustment screw or by changing the dosing plug.

The SGA dosers are adjusted by twisting the adjustment screw with a hex key.

Adjust SG dosers by turning the hex screw under the metallic protective cap. The other end of the screw is inside the doser cylinder and, when adjusted, it directly changes the piston's range of movement.

The WI & NI doser's lubricant dosage is adjusted by changing the movement of the piston using adjusting plugs of varying lengths.

During both pressurizations of the lubrication cycle the doser with one outlet always feeds the lubricant to the same lubrication point. The doser with two outlets feeds the lubricant to two different lubrication points. This has been taken into account in the adjustment tables.

Table 1. Drawing numbers for adjustment values

Doser types (ZN, SS)	Drawing number
SGA-011, SGA-012	460120
SGA-11, SGA-12	460122
SGA-21, SGA-22	460123
SG-31, SG-32	460124
SG-41, SG-42	460126
SG-51, SG-52	460128

Adjustment of SGA dosers

1. Remove the protective plastic cap.
2. Make sure that the indicator is inside the doser body.

WARNING! The SGA doser is damaged if the adjustment screw is adjusted against the indicator.

3. Twist the adjustment screw into the basic position where it touches the indicator lightly.
4. Check the adjustment value table for the correct number of adjustment screw turns for the required lubricant dose.
5. Twist the screw as many times away from the doser body as specified in the table. The indicator body has dosage grooves to facilitate adjustments.
6. Screw the protective cap back in its place.

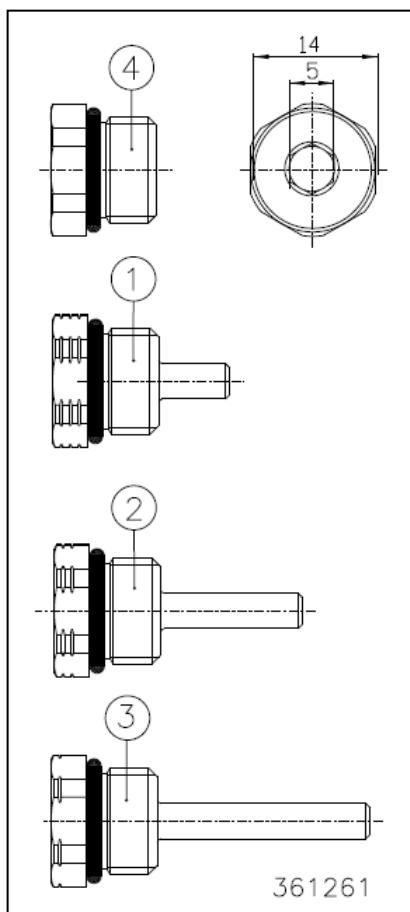

Adjustment of SG dosers

1. Remove the protective metal cap from the top of the hex head screw.
2. Twist the hex head screw into the basic position at the level of the front surface of the thread on the body.
3. Check the adjustment value table for the correct amount of turns for the required lubricant dose.
4. Twist the hex head screw as many times away from the doser body as specified in the table. If the number is negative, the screw is twisted into the doser. The protective cap has dosage grooves to facilitate adjustments.
5. Screw the protective cap back in its place.

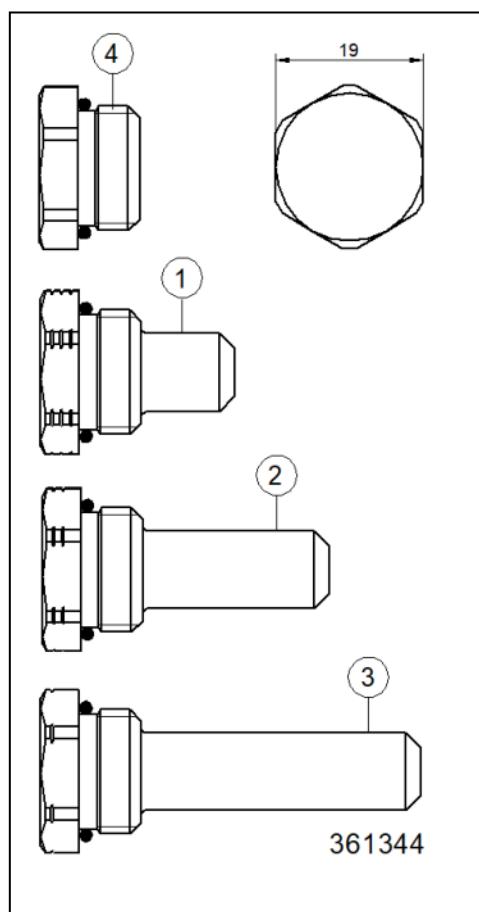

Adjustment of WI and N dosers and dosages

1. Remove the doser's end plug (pos. 9)
2. Place an end plug corresponding to the desired dosage on the doser and tighten it to 22.5 Nm.

9 REMOVING FROM SERVICE

9.1 Temporary removing from service

The system can be temporarily shut down by disconnecting it from electrical, pressurised air and hydraulic outlets. For further information, see section "General description" of this manual. For temporary removal from service, see also section "Storage". To restart the system, see the "Operation" and "Technical specification" sections.

9.2 Final removing from service

All relevant country-specific instructions and regulations regarding the decommissioning and disposal of contaminated equipment must be followed when decommissioning the product.

Oy SKF AB will receive products it has delivered and take care of their appropriate disposal. Oy SKF AB has the right to charge for expenses that are not related to disposal and recycling.

10 STORAGE

The products must be stored as follows:

- The storage space must be dry, dust-free and well ventilated
- The maximum storage time is 24 months
- The storage temperature must be 10–40°C
- Avoid exposure to direct sunlight and thermal radiation
- Store the products clear of the ground or floor
- Protect the products from mechanical shocks, corrosion and dust
